### Web Framework:

- Angular.js: We are using this framework because there is a lot you can do with it. Also, there is a a lot of documentation for it.
- Yeoman: We are using it as a tool to generate code and make our life easier by using angular

**CSS Framework:**

- Bootstrap: The css is generated already by it and we just need to incorporate it in our code easily. We do not have to touch the css, we just call the classes into our HTML

**Mobile Layout:**
